E-6600

The professional Elite Series II Screen Printing Presses are proven workhorses.

They are designed for heavy duty use with a 25" screen frame capacity, and come loaded with many features that would be an asset in any screen printing shop. Easy and fast setup of multi color screen printed designs. Tool free adjustments for lift spring tension, micro registration, screen angle, off contact, and platen leveling. Each print head has warp screen adjustment. A steel key glides into 2 roller bearings which hold perfect registration from color to color.

The Elite Series II Presses are manufactured in the USA from the finest quality materials. All sheet metal parts are punched with a CNC turret punch press, and then formed to close tolerances. All tubular steel parts are welded using jigs to ensure consistency. Our aluminum parts are precision machined to close tolerances. The screen back clamp is extruded aluminum for strength with minimal deflection. All parts have powder coated finishes and are assembled by hand to ensure easy set up of the press, increased production and a trouble free work life.
